- The Association for Supervision and Curriculum Development offers an array of free <u>live and interactive</u> as well as <u>archived</u> webinars, delivered by teacher leaders from around the world.

- <u>OK2Ask</u> provides free, live virtual workshops for teachers on topics ranging from building technology-infused lessons to developing formative assessments using online tools to using Google maps in the classroom.

- <u>Intel</u> offers K–12 teachers free interactive professional development courses focused on technology integration and 21st century skills. The courses are bite-sized, self-paced, portable, and just-in-time so that you can maximize learning on the schedule that makes the most sense for you.

- The Library of Congress' <u>free online modules</u> are self-paced, interactive, and focused on teaching how to understand, analyze, and use the Library of Congress and its vast collection of primary sources. Bonus tip: Contact your local library or a local university library about professional development and/or classroom resources available in their online or other collections. Many of these institutions have carefully-selected and curated materials intended especially for teachers and students.

- <u>Concept to Classroom</u> is a series of self-paced workshops covering topics such as inquiry-based learning, teaching to academic standards, making family and community connections, and interdisciplinary learning.
